The tube centring tool

Fast and secure centring and clamping of tubes

The tube centring jig – long proven in the tube industry – is an innovative tool for tube butt joints.

Not only spot but finish welding

The entire weld seam can be reached with the torch. The jaws can also centre tubes of different diameters. An ideal tool for joining pre-curved tubular frames.

Applications

• Railings • Steel structures • Plumbing and heating • Piping

Advantages

- Insert, clamp, centre – without assistance
- Diameter compensation – even with different cross-sections
- Securely held – both hands free for welding
- Double collets – tubes held in alignment
- Faster assembly, less reworking – time is money
- Round and square tubes, angle adjustable from 50 to 180 degrees

Technical specifications

Length	190 mm
Width	175 mm
Height	180 mm
Weight	3.7 Kg
Round material from – to	10 mm – 65 mm diameter
Square material to	50 mm width
Angle range	50° – 180°
Surface treatment	Galvanised (prisms: stainless steel)
